

ML Day4 Lab

1. Prepare an ML model using KMeans algorithm to cluster some sample input generated using make_blob function. Plot the clusters.
2. Prepare an ML model using KMeans algorithm to cluster some sample input generated using make_moon function. Plot the clusters. Also plot the same points by clustering it with Spectral Clustering Model.
3. Try clustering with some suitable datasets in the link <http://cs.joensuu.fi/sipu/datasets/>
